The Agentic Data Security Platform

Know what sensitive data every AI agent can reach, and right-size that access before it is used.

AI agents are how the business moves faster. They are also the fastest path to your sensitive data. With Gartner expecting the average Fortune 500 enterprise to run more than 150,000 agents by 2028, tracking each agent individually is a losing game. The smarter move is to start with the one thing every agent is after: your data. Sentra maps the sensitive data each agent can reach and right-sizes that access before it becomes exposure. **Don't chase your agents. Protect your data.**

Your data has **a new kind of consumer**

Data security was built for people.
Three forces have changed that at the same time.

The data explosion.
Data is copied faster than anyone can inventory it, behind permissions nobody has reviewed.

AI agents are scaling exponentially.
Agents act on their own, at machine speed, with access that was sized for people.

The business wants AI now.
Governance moves at human pace, so security either slows AI down or lets it run blind.

Three questions Sentra answers, continuously

01 What sensitive data can every AI agent reach?

02 Should that agent be able to reach it?

03 What can the agent do with that access?

The Sentra Agentic Data Security Platform **six capabilities, built on DSPM**

Data Discovery and Classification

Agentless discovery and classification across cloud, SaaS, databases, on-premises and AI environments, with business context on every finding.

Data Hygiene

Redundant, obsolete and toxic data is retired before agents find it, cutting exposure and storage spend.

Identity & Access

Every human, service account and AI agent is mapped to the data it can reach, then right-sized with Adaptive Permissions Sizing.

Shadow AI DLP

Find the AI apps and agents in use and stop sensitive data from being shared with them.

Automated Remediation

Excess access is revoked and fixes are pushed through your existing DLP, IAM, ITSM and AI gateway controls.

Continuous Compliance

Audit-ready evidence for GDPR, HIPAA, CCPA and the EU AI Act, generated inside your environment.

sentra

Built to run **inside your environment**

Sentra provisions ephemeral, read-only scanners inside your own cloud account. Discovery, classification, and analysis all happen there, and only enriched metadata returns to Sentra. Your data is never copied out or moved between regions, and fully managed scanners scale to zero when idle, with no appliance to maintain.

Read-only scanners | Data never leaves | In-region processing | Scales to zero | No appliance

Proven in a **Fortune-500 bake-off**

9 PB

scanned in under 72 hours

a top emerging DSPM vendor failed to complete a 1 PB scan.

98%+

classification accuracy

versus the competitor's sub-93%.

~$40K

per year to scan 100 PB

versus more than $400K.

Head to head, Sentra scanned **9 PB in under 72 hours** where a top emerging DSPM vendor failed to complete a 1 PB scan. Sentra delivered **98%+ accuracy** against the competitor's sub-93%, at about **$40K per year** to scan 100 PB versus more than $400K.

Sentra is **SOC 2 Type II** and **ISO 27001** certified, with third-party penetration testing every six months.

SOC 2 Type II | ISO 27001
